5 Soal Un Matematika Sma Ipa 2017 Dan Pembahasannya Deconstructing the 2017 Indonesian National Examination UN Mathematics An InDepth Analysis of Five Sample Questions The Indonesian National Examination UN for Senior High School SMA Science Program IPA students is a highstakes assessment measuring their mathematical proficiency This article delves into five representative questions from the 2017 mathematics UN examination providing a detailed solution for each alongside an analysis of the underlying mathematical concepts and their realworld applications Well explore not only the technical aspects but also the pedagogical implications and strategies for improved problemsolving Note As the exact 2017 UN questions arent publicly available in a readily compiled format we will construct five hypothetical questions representative of the difficulty and topic distribution observed in past examinations These will cover key areas such as algebra calculus geometry and statistics

Question 1 Algebraic Manipulation and Modeling Question A rectangular garden has a length that is 3 meters longer than its width If the area of the garden is 70 square meters find the dimensions of the garden Solution Let the width be x meters The length is then $x + 3$ meters The area is given by $x(x + 3) = 70$ Solving the quadratic equation $x^2 + 3x - 70 = 0$ yields $x = 7$ or $x = -10$ Since width cannot be negative the width is 7 meters and the length is 10 meters Realworld Application This problem directly applies to practical scenarios involving land measurement construction and design Understanding quadratic equations is crucial in various engineering and architectural applications

Question 2 Calculus and Rate of Change Question The position of a particle moving along a straight line is given by $s(t) = 6t^3 - 9t^2$ where s is the distance in meters and t is the time in seconds Find the velocity and acceleration of the particle at $t = 2$ seconds Solution Velocity $v(t)$ is the first derivative of $s(t)$ $v(t) = 18t^2 - 18t$ At $t = 2$ $v = 36 - 36 = 0$ ms Acceleration $a(t)$ is the second derivative at $6t - 18$ At $t = 2$ $a = 12 - 18 = -6$ ms Realworld Application Calculus specifically derivatives is essential in physics to model motion velocity and acceleration Understanding these concepts is vital in fields like engineering aerospace and even economics eg modeling economic growth

Question 3 Geometry and Trigonometry Question A triangle has angles A , B and C Angle A is 60° and the sides opposite to A and B are 10 cm and 8 cm respectively Find the length of side b opposite to angle B Solution Using the sine rule $\frac{a}{\sin A} = \frac{b}{\sin B}$ We have $\frac{10}{\sin 60^\circ} = \frac{b}{\sin B}$ We need to find angle B first Since the sum of angles in a triangle is 180° $C = 180^\circ - 60^\circ - B = 120^\circ - B$ Applying the sine rule again we can use the sine rule in different forms to solve for b Realworld Application Trigonometry finds applications in surveying navigation and architecture Calculating distances and angles is crucial in various engineering projects and geographical studies

Question 4 Statistics and Probability Question The average score of a class of 30 students in a mathematics test is 75 If 5 students with an average score of 85 are added to the class what is the new average score Solution Total score of initial 30 students $30 \times 75 = 2250$ Total score of 5 added students $5 \times 85 = 425$ Total score of the new class 35 students $2250 + 425 = 2675$ New average score $\frac{2675}{35} = 76.43$ Realworld Application Statistics is essential in data analysis market research and decision making across various fields Understanding averages and distributions is crucial for interpreting data and drawing

meaningful conclusions

Question 5 Vectors and Coordinate Geometry Question Find the equation of the line passing through points A(2, 3) and B(4, 1). **Solution** The slope of the line is $m = \frac{y_2 - y_1}{x_2 - x_1} = \frac{1 - 3}{4 - 2} = -1$. Using the point-slope form of a line $y - y_1 = m(x - x_1)$ we get $y - 3 = -1(x - 2)$ which simplifies to $y = -x + 5$.

Realworld Application Coordinate geometry is fundamental in mapping, computer graphics, and robotics. Understanding lines and their equations is crucial for representing and manipulating spatial information.

3 Data Visualization A table summarizing the questions and their realworld applications would be appropriate here. Due to the limitations of this text-based format, a visual table cannot be created. However, a table can easily be constructed by the reader using the information provided above.

Conclusion The 2017 Indonesian National Examination in Mathematics for the Science Program highlighted the importance of a strong foundation in various mathematical areas. The questions tested not only procedural fluency but also conceptual understanding and the ability to apply mathematical knowledge to realworld contexts. Preparing students for such examinations requires a balanced approach emphasizing both theoretical knowledge and practical problem-solving skills. Furthermore, incorporating realworld applications into the curriculum can enhance student engagement and motivation.

Advanced FAQs
